Counsel for Defendant Meta Platforms, Inc.

**UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA
SAN FRANCISCO DIVISION**

RICHARD KADREY *et al.*,

Individual and Representative Plaintiffs,

V.

META PLATFORMS, INC., a Delaware corporation,

Defendant.

Case No. 3:23-cv-03417-VC-TSH

**DEFENDANT META PLATFORMS, INC.’S:
REPLY IN SUPPORT OF ITS MOTION FOR
PARTIAL SUMMARY JUDGMENT**

Date: May 1, 2025
Time: 10:00 a.m.
Dept: Courtroom 4 – 17th Floor
Judge: Vince Chhabria
Trial Date: None
Date Action Filed: July 7, 2023

TABLE OF CONTENTS

	Page
I. INTRODUCTION.....	1
II. PLAINTIFFS’ “DISTRIBUTION” CLAIM IS NOT PROPERLY BEFORE THE COURT AND DOES NOT CREATE A GENUINE ISSUE AS TO WHETHER META’S COPYING WAS FAIR.....	2
III. META’S COPYING TO DEVELOP AND TRAIN LLAMA WAS FAIR USE.....	6
A. Meta’s Motion for Summary Judgment of Fair Use is Properly Directed to All of Its Copying of Plaintiffs’ Works to Train and Develop Llama.....	7
B. Bad Faith, If Relevant at All, Does Not Preclude Fair Use.....	8
C. The Fair Use Factors Weigh Decisively in Favor of Fair Use.....	12
1. The purpose and character of Meta’s use strongly favor fair use (Factor One).....	13
2. The “nature of the copyrighted work” favors fair use (Factor Two).....	16
3. Meta’s copying of entire books was reasonable (Factor Three).....	18
4. Llama does not harm any cognizable market for Plaintiffs’ works (Factor Four).....	19
a. Any so-called “market” for LLM training data is not cognizable.....	19
b. There is no market to license Plaintiffs’ books for LLM training and none is likely to form.....	21
c. Llama’s benefit to the public greatly outweighs any hypothetical harm to the market for Plaintiffs’ books.....	26
IV. THE COURT SHOULD GRANT SUMMARY JUDGMENT TO META ON THE DMCA CLAIM	27
V. CONCLUSION.....	30

TABLE OF EXHIBITS

Ex. No.	DESCRIPTION
EXHIBITS TO REPLY DECLARATION OF BOBBY GHAJAR (“BG II”)¹	
54	Excerpts from the transcript of the December 10, 2024 deposition of Plaintiff Klam, which reflect his testimony as to whether he has used Meta’s Llama models, together with excerpts of certain Plaintiffs’ Responses to Meta’s Requests for Admissions, namely, Responses to Request No. 25 (No. 27 as to Pl. Farnsworth), concerning Plaintiffs’ personal use, if any, of Meta’s Llama models
55	Excerpts from the transcript of the deposition of Plaintiffs’ rebuttal expert Dr. David Choffnes, taken March 28, 2025
56	Excerpts from the transcript of the deposition of Plaintiffs’ expert Dr. Cristina Lopes, taken February 13, 2025
57	Excerpts from the transcript of the second deposition of Meta’s expert Barbara Frederiksen-Cross, taken April 4, 2025
58	Rebuttal Expert Report of Barbara Frederiksen-Cross, dated February 10, 2025
59	Second Rebuttal Expert Report of Barbara Frederiksen-Cross (to the “Rebuttal Report of David R. Choffnes, Ph.D, February 26, 2025”), dated April 1, 2025
60	Excerpts from the transcript of the Rule 30(b)(1) deposition of Nikolay Bashlykov, taken December 5, 2024
61	Excerpts from the transcript of the Rule 30(b)(1) deposition of Alex Boesenberg, taken November 18, 2024
62	Excerpts from the transcript of the Rule 30(b)(6) deposition of Sy Choudhury, taken December 5, 2024

¹ For the Court’s ease of reference, exhibits attached to the BG II declaration submitted in support of this reply start at No. 54; citations to BG Exs. 1–53 are to the exhibits to the BG Declaration (Dkt. 490) submitted in support of Meta’s Motion for Partial Summary Judgment and Opposition to Plaintiffs’ Motion for Partial Summary Judgment [Dkt. 489] (“Meta Mot.”). Meta refers to Plaintiffs’ summary judgment motion [Dkt. 472] as “Pls’ Mot.” and to Plaintiffs’ Reply to Motion for Partial Summary Judgment and Opposition to Meta’s Motion for Partial Summary Judgment [Dkt. 517] as “Opp.” Meta refers to the amicus briefs filed in support of Meta as follows: Brief of Intellectual Property Law Professors [Dkt. 509-2] (“IP Profs.’ Br.”); and Brief of Electronic Frontier Foundation [Dkt. 516] (“EFF Br.”). Meta refers to the amicus briefs filed in support of Plaintiffs as follows: Brief of Copyright Law Professors [Dkt. 525] (“Pls’ Profs.’ Br.”); Brief of International Association of Scientific, Technical and Medical Publishers [Dkt. 527] (“IASTM Br.”); Brief of Copyright Alliance [Dkt. 529] (“CA Br.”); and Brief of Association of American Publishers [Dkt. 535] (“AAP Br.”). Unless otherwise noted, all other abbreviations used herein are as defined in Meta’s Motion, all emphasis is added, and internal citations and quotation marks are omitted.

1 **I. INTRODUCTION**

2 The aims of copyright are to encourage creativity, expand human knowledge, and enrich
 3 our shared culture. Thus, “the Supreme Court has long held that copyright law is intended to benefit
 4 the public, not authors.” *Thaler v. Perlmutter*, 130 F.4th 1039, 1049 (D.C. Cir. 2025). That is why
 5 anyone can read and learn from a book without permission—whether they buy it new (and the author
 6 is remunerated), or instead buy it used, borrow it from a friend, or find it on a park bench (in which
 7 cases the author is not). That is also why the Copyright Act allows the unauthorized copying of a
 8 work to transform it into something new; such uses serve distinct purposes and result in new
 9 expression that expands the public discourse. Meta’s Llama models epitomize these objectives,
 10 providing a tool enabling anyone to create new, non-infringing text, benefiting users and the public
 11 without substituting for the works on which they were trained.

12 Plaintiffs fail to meaningfully engage with the undisputed facts and bedrock legal principles
 13 establishing that Meta’s use of Plaintiffs’ books to develop and train Llama was fair. They have
 14 no evidence to rebut that Llama serves a fundamentally different purpose than their books, without
 15 causing Plaintiffs any harm cognizable under copyright. After nearly two years of litigation, there
 16 still is no evidence that anyone has ever used Llama as a substitute for reading Plaintiffs’ books, or
 17 that they even could. Llama does not output any of Plaintiffs’ books, or allow anyone to read them.
 18 Instead, Plaintiffs merely repeat their refrain that Meta copied their work for free and without
 19 permission—ignoring the many Supreme Court and circuit cases holding that the fair use doctrine
 20 *permits exactly that* where, as here, the result of such copying is a new technology that indisputably
 21 does not reproduce their expression. Llama is the textbook definition of transformative fair use.

22 Plaintiffs urge the Court to disregard the fair use factors altogether, insisting that “fair use
 23 cannot apply if the copyrighted work was illegally obtained in the first place.” Opp. at 4. Meta
 24 addressed this argument in its Motion (at 18–21), but Plaintiffs *still* cite no valid authority for this
 25 proposition, and it is wrong, *see Campbell v. Acuff-Rose Music, Inc.*, 510 U.S. 569, 577–78 (1994);
 26 *Google LLC v. Oracle Am., Inc.*, 593 U.S. 1, 32 (2021). Indeed, Sony made this exact argument in
 27 *Connectix*, urging that the defendant engaged in bad faith precluding fair use because it had
 28 downloaded a bootleg copy of Sony’s software to create a competing game system, yet the Ninth

1 Circuit analyzed all four factors and found use of the software to be fair “as a matter of law.” *Sony*
 2 *Comput. Ent., Inc. v. Connectix Corp.*, 203 F.3d 596, 608 (9th Cir. 2000). Likewise here, the fair
 3 use factors would weigh decisively in Meta’s favor *even if* bad faith were a relevant consideration.

4 Plaintiffs and their amici also attempt to avoid a ruling that Meta’s *copying* was fair by
 5 pointing to unsubstantiated allegations that Meta *distributed* Plaintiffs’ works via torrent. But
 6 distribution is a separate claim on which no party moved for summary judgment. Nor do Plaintiffs
 7 have facts to establish that Meta distributed any of their works. Plaintiffs’ baseless distribution theory
 8 cannot create a genuine issue precluding summary judgment for Meta that its *copying* was a fair use.

9 Applying well-established law to the undisputed facts of this case, Meta’s copying of datasets
 10 containing Plaintiffs’ works to develop Llama was a quintessentially transformative, non-infringing
 11 fair use under 17 U.S.C. § 107. Nor have Plaintiffs presented a coherent theory, much less sufficient
 12 evidence, to support their copyright management information (“CMI”) removal claim under 17
 13 U.S.C. § 1202—ignoring sworn testimony as to the practical reasons why Meta removed redundant
 14 information from datasets (none of which was for the purpose, or had the effect, of “concealing”
 15 infringement). The Court should enter judgment for Meta on Plaintiffs’ §§ 106(1) and 1202 claims.

16 **II. PLAINTIFFS’ “DISTRIBUTION” CLAIM IS NOT PROPERLY BEFORE THE COURT AND DOES
 17 NOT CREATE A GENUINE ISSUE AS TO WHETHER META’S COPYING WAS FAIR**

18 Plaintiffs devote significant attention in their latest brief to arguing that Meta violated the
 19 Copyright Act by distributing their works. Opp. at 2–10. But as Meta’s Motion noted (at 2 n.1),
 20 and Plaintiffs do not dispute, Plaintiffs did not seek summary judgment that Meta distributed their
 21 works in violation of § 106(3); they moved only as to Meta’s *copying* under § 106(1).² Pls’ Mot.
 22 at 21 (“*copying* of the Books without Plaintiffs’ permission violated Plaintiffs’ exclusive rights under
 23 § 106(1”); *id.* at 19 (“[T]he Court should grant summary judgment to Plaintiffs on direct

24 ² As Plaintiffs acknowledge, distinct uses of a copyrighted work “require separate analyses.” Opp.
 25 at 11. Both uploading and downloading copyrighted works may be infringing if not fair use. Opp.
 26 at 6–7. “[U]ploading a copyrighted [] file to other users ... violates the copyright holder’s § 106(3)
 27 distribution right”; “[d]ownloading a copyrighted [] file ... violates the copyright holder’s § 106(1)
 28 reproduction right.” *Columbia Pictures Indus., Inc. v. Fung*, 2009 WL 6355911, at *8 (C.D. Cal.
 Dec. 21, 2009), *aff’d in part as modified*, 710 F.3d 1020, 1034 (9th Cir. 2013). “The fair use
 provision, and the first factor in particular, requires an analysis of the specific ‘use’ of a copyrighted
 work[,]” because it “may be fair when used for one purpose but not another.” *Andy Warhol Found.
 for the Visual Arts, Inc. v. Goldsmith*, 598 U.S. 508, 533 (2023). Reproduction and distribution
 are, thus, distinct uses that must be evaluated separately.

1 infringement due to Meta’s *copying* the Books *from* pirated databases.” They also moved for
 2 summary judgment that Meta’s *copying* was not fair use, but sought no such finding on distribution.
 3 *Id.* at vii (Not. of Mot.) (seeking summary judgment that “Meta’s *reproduction* of Plaintiffs’
 4 Copyrighted Books without permission, including through peer-to-peer file sharing, is not fair use
 5 under 17 U.S.C. § 107”), 22 (“Meta’s Initial Reproduction of Pirated Copies of Plaintiffs’ Books Is
 6 Not Fair Use”). No distribution claim is properly before the Court on summary judgment.

7 Plaintiffs nevertheless assert for the first time on reply that “summary judgment is warranted
 8 on the basis of Meta’s distribution, as well as Meta’s copying, of the Books through P2P networks”
 9 because “there is no dispute that Meta uploaded massive amounts of copyrighted data, and … made
 10 Plaintiffs’ Books available for upload[.]” Opp. at 10. In fact, Meta disputes every part of this
 11 assertion, and for good reason. First and foremost, Plaintiffs may not seek summary judgment on
 12 distribution by way of their reply brief. *Gabriel v. Cnty. of Sonoma*, 725 F. Supp. 3d 1062, 1078–
 13 79 (N.D. Cal. 2024) (refusing to address “arguments raised for the first time in [summary judgment]
 14 reply brief”); *Arnett v. Seaside Transp. Servs., LLC*, 2015 WL 12711336, at *1 n.1 (N.D. Cal. June
 15 3, 2015) (Chhabria, J.) (same). Equally inappropriate is Plaintiffs’ argument that “Meta offers no
 16 facts to dispute the overwhelming probability that it also uploaded Plaintiffs’ works[.]” Opp. at 7.
 17 Meta had no burden to refute a motion Plaintiffs did not make.³

18 Even if the Court were inclined to consider Plaintiffs’ improper distribution arguments, they
 19 are of no help to Plaintiffs because Plaintiffs lack evidence to show that Meta distributed any of
 20 their works. According to Plaintiffs, torrenting may involve two forms of “data uploading”:
 21 “leeching” (simultaneously uploading pieces of a file while a download is still underway) and
 22 “seeding” (which occurs only after a download completes). Pls’ Mot. at 12; Meta Mot. at 34.
 23 Plaintiffs have abandoned any claim based on seeding,⁴ leaving only potential leeching at issue.
 24

25 ³ Although Plaintiffs did not move for summary judgment on distribution, Meta called out the lack
 26 of evidence to support a distribution claim and noted that it may seek leave to affirmatively move
 27 for summary judgment on any distribution claim once the newly ordered fact and expert discovery
 28 was completed. Meta Mot. at 34–35, 2 n.1.

29 ⁴ Plaintiffs concede that Meta used a “script that worked to prevent ‘seeding,’” i.e., that Meta did
 30 not upload files it had already downloaded via torrent. Pls’ Mot. at 13; Meta Mot. at 34. Further,
 31 Dr. Choffnes’s opinions on the probability of distribution did not take seeding into account. BG II
 32 Ex. 55 at 73:15–18; BG II Ex. 59 (04/1/25 Frederiksen Report) ¶¶ 30–31.

1 Opp. at 8. Yet Plaintiffs also admittedly lack evidence that Meta ever uploaded any of their works,
 2 or any identifiable part of those works, during the so-called “leeching” phase. Rather, the most they
 3 claim their expert can show is a probability that Meta uploaded “at least *some* [unspecified] portion
 4 of *one* of Plaintiffs’ Books” “*or* at minimum, made them available to peers[.]” *Id.* at 7, 8 (emphases
 5 in original). This does not raise a genuine issue of fact as to distribution of Plaintiffs’ works.

6 Specifically, Plaintiffs’ expert conceded that he had not identified *any* of the more than four
 7 dozen at-issue works that was allegedly distributed. BG II Ex. 55 (Choffnes Dep.) at 106:7–15.)
 8 Because § 106(3) requires a showing of distribution “of the copyrighted work,” and Plaintiffs can
 9 identify no work that Meta is supposed to have distributed, they cannot prove this claim. Plaintiffs’
 10 argument also fails because, in place of evidence of actual distribution, it relies on a probability
 11 analysis that is irremediably flawed. BG II Ex. 59 (4/1/25 Frederiksen Report) ¶¶ 69–81.
 12 Distribution of Plaintiffs’ works was, in fact, highly *unlikely* given the tiny fraction of the
 13 downloaded datasets that comprise Plaintiffs’ works, the fact that Meta could have uploaded no
 14 more than 30% of the data volume it downloaded via torrent, and many other factors that would
 15 have had to have aligned for distribution of Plaintiffs’ works to have actually occurred. *Id.* ¶¶ 28–
 16 60; BG II Ex. 57 (Frederiksen Dep.) 118:12–121:18. And even if Plaintiffs’ own flawed analysis
 17 were applied to assess the probability that Plaintiffs’ works were distributed, the likelihood that
 18 Meta distributed a piece from *each* of their works is vanishingly small; for the Internet Archive
 19 dataset, for example, that probability is 0.00000000000000002848%—effectively zero. BG II
 20 Ex. 59 ¶¶ 34–37. In short, the record falls far short of establishing distribution of Plaintiffs’ works.

21 Recognizing that they cannot prove actual distribution, Plaintiffs argue that they need only
 22 show that Meta made works “available” for distribution. Opp. at 6, 9–10. That argument also fails.

23 Plaintiffs’ only authority for their assertion that merely “making available” works, without
 24 actually uploading them, is sufficient to establish distribution is *Hotaling v. Church of Jesus Christ*
 25 *of Latter-Day Saints*, 118 F.3d 199, 203 (4th Cir. 1997). Opp. at 9. But that is not the law in the
 26 Ninth Circuit. In *Perfect 10, Inc. v. Amazon.com, Inc.*, 508 F.3d 1146, 1162 (9th Cir. 2007), the
 27 Ninth Circuit affirmed that “distribution requires an ‘actual dissemination’ of a copy,” i.e., actually
 28 “transmitting the [copyrighted work] electronically to the user’s computer.” Likewise, in *VHT, Inc.*

v. *Zillow Group, Inc.*, 918 F.3d 723, 736 (9th Cir. 2019), the Ninth Circuit rejected the “mak[ing] available” theory as “neither supported by the [Copyright Act] nor embraced by this court.” Although *VHT* involved a claim for infringement of the exclusive “display” right, district courts in the Ninth Circuit consistently cite it in rejecting *Hotaling*’s “making available” distribution theory. See, e.g., *EVOX Prods., LLC v. Verizon Media Inc.*, 2021 WL 3260609, at *3–4 (C.D. Cal. May 5, 2021) (citing *VHT* and holding that a distribution claim “based on a ‘making available theory’ ... fails as a matter of law.”). Even the single “in-circuit” case Plaintiffs cite (Opp. at 9) as supposedly supporting application of *Hotaling* held just the opposite: that distribution requires “an actual dissemination” and that “making available” does not suffice under *Perfect 10* and *VHT*. *SA Music, LLC v. Amazon.com, Inc.*, 2020 WL 3128534, at *2–3 (W.D. Wash. June 12, 2020); see also *Atlantic Recording Corp. v. Howell*, 554 F. Supp. 2d 976, 983 (D. Ariz. 2008) (“Unless a copy of the work changes hands in one of the designated ways, a ‘distribution’ under § 106(3) has not taken place. Merely making an unauthorized copy of a copyrighted work available to the public does not violate a copyright holder’s exclusive right of distribution.”)

Plaintiffs also cite *Columbia Pictures*, 710 F.3d at 1034, for the proposition that summary judgment can be granted based on statistical evidence showing a probability of distribution. Opp. at 6, 8. But in that case, statistical evidence showing a probability that most of the files uploaded were copyrighted was “corroborated by evidence of specific instances of downloads and transfers of copyrighted works,” including a declaration from a third party who had used defendant’s site to download one of the plaintiff’s copyrighted works and evidence of 400 other uploads to specific IP addresses. *Columbia Pictures*, 2009 WL 6355911, at *9. Plaintiffs also “linked the United States-based downloads (as identified by Plaintiffs’ experts) with copyrighted works owned by each of the individual Plaintiffs.” *Id.* Plaintiffs admittedly have no such evidence in this case.

Finally, Plaintiffs seek to blame Meta for their inability to prove actual dissemination, alleging that Meta “‘destroyed’ evidence that might have identified content it distributed[.]” Opp. at 7. These baseless allegations of spoliation do not excuse Plaintiffs’ failure of proof. The parties expressly agreed in the stipulated ESI Order entered by the Court that “[s]ystem, server, or network logs” should “not be preserved” based on the proportionality factors. Dkt. 100-1, at 7. Plaintiffs

1 also explicitly informed the Court in seeking leave to amend their complaint that they would not
 2 seek and did not need any further discovery to support their distribution claim. Dkt. 300 at 6–7.⁵ In
 3 any event, Meta has, in fact, produced logs for the 2022 download and usage records for the 2024
 4 download (BG II Decl. ¶ 15), and the 2023 logs Plaintiffs complain were “overridden” (Opp. at 7)
 5 are irrelevant because the torrent download Meta performed in 2023 was of academic publications
 6 from SciMag, did not include fiction books (or any of Plaintiffs’ books), and thus could not have
 7 resulted in distribution of Plaintiffs’ works. Meta Mot. at 8; Dkt. 494 ¶¶ 4–5; *see* BG II Ex. 58 ¶¶
 8 75–77, 85–87.⁶ The portion of LibGen downloaded in 2023 that contains Plaintiffs’ works (LibGen
 9 Fiction) was downloaded via a “direct download” technique that did not involve use of BitTorrent
 10 and, thus, did not pose any risk of uploading data to others. Bashlykov Decl. (Dkt. 494) ¶¶ 4–5; BG
 11 II Ex. 58 (2/10/25 Frederiksen Report) ¶¶ 75–76.

12 In sum, although Plaintiffs’ Opposition asserts that they “*need* not prove actual distribution
 13 of their books” to prevail on summary judgment, what it really serves to show is that they *cannot*
 14 prove this claim. Opp. at 6–10. Plaintiffs cannot rely on unsupported and untenable allegations
 15 that Meta distributed their works—a claim on which they did not move for summary judgment—
 16 to defeat Meta’s own Motion for summary judgment that its *copying* of Plaintiffs’ works was fair.⁷

17 III. META’S COPYING TO DEVELOP AND TRAIN LLAMA WAS FAIR USE

18 Plaintiffs’ Opposition fails to rebut Meta’s showing that its copying to develop and train
 19 Llama was fair use. Contrary to Plaintiffs’ assertions, this determination is appropriate at summary
 20 judgment under a straightforward application of copyright law to the undisputed facts.

21

22 ⁵ As Judge Hixson found, Plaintiffs never sought any logs relating to torrenting before the close of
 23 discovery. *See* Dkt. 400 at 6–7. Plaintiffs sought logs relating to torrenting for the first time in
 24 their March 5, 2025 discovery proposal (Dkt. 467), which was adopted by the Court. In accordance
 25 with the ESI Order, the 2023 logs ceased to be available long before that date.

26 ⁶ Plaintiffs’ complaint about AWS instances is also groundless; the files downloaded to them were
 27 retained in other storage and produced to Plaintiffs. BG II Ex. 58 (2/10/25 Frederiksen Report)
 28 ¶ 82 nn. 133, 135, 137.

29 ⁷ If Plaintiffs’ argument is, instead, that Meta’s copying of their works was not fair because Meta
 30 uploaded the unidentified works of *other* authors, that would be even further afield. Plaintiffs have
 31 no protectable interest in third party works, could not have been harmed by their alleged
 32 distribution, and would not have standing to assert such a claim. By the same token, the repeated
 33 assertion in the IASTM Brief that Meta distributed *their* works or those of other third parties is
 34 unsupported by evidence and irrelevant to the issues before the Court. Only Plaintiffs’ claims are
 35 before the Court, and they have not shown distribution of *their* works or even part of them.

1 **A. Meta’s Motion for Summary Judgment of Fair Use is Properly Directed to All**
 2 **of Its Copying of Plaintiffs’ Works to Train and Develop Llama**

3 As alleged in the TAC, Plaintiffs’ claim for violation of § 106(1) is that, “[*t*]o train Llama,
 4 Meta downloaded and made several copies” of various datasets, including Books3, LibGen, Z-Lib,
 5 and Sci-Hub, which included the “Infringed Works,” and that “Meta made copies of the Infringed
 6 Works *during the training process to develop Llama* without Plaintiffs’ permission.” TAC (Dkt.
 7 407) ¶¶ 98, 100. Further, the TAC defines the “Infringed Works” as “the copyrighted books that
 8 Meta copied and used without permission *to train Llama*, regardless of where or how Meta
 9 downloaded or otherwise accessed the books.” *Id.* ¶ 46. In other words, the only copying the TAC
 10 alleges constituted infringement under § 106(1) was Meta’s copying to develop and train Llama.
 11 Accordingly, Meta moved for summary judgment that its “copying of Plaintiffs’ works to *develop*
 12 *and train* large language models is fair use and does not infringe Plaintiffs’ rights under 17 U.S.C.
 13 § 106(1).” Meta Mot. at 1 (Notice of Mot.); *see id.* at 2, 36, 37 (same). Meta’s Motion does not
 14 “ignore[]” “other infringements” (Opp. at 10–11); no other “infringements” are alleged or at issue.

15 By the same token, all of the copying detailed at pages 12–14 of the Opposition was, even
 16 by Plaintiffs’ telling, undertaken to develop and train Llama. Plaintiffs allege that an employee in
 17 France downloaded books from LibGen in 2022 to “determine ‘if there [wa]s value’ in copyrighted
 18 books as training data” for Llama, which was plainly part of the development process even if these
 19 copies ultimately were not used to train a Llama model released to the public. Opp. at 12. So, too,
 20 was use of works for “LLM research and evaluation, including ‘assess[ing] the general knowledge
 21 and expressive abilities of models, and as a means of testing LLM’s memorization.’” *Id.* at 12 n.9.
 22 It is standard practice (and essential to AI development) to perform experiments and analyses to
 23 assess the potential impact training data may have on the model. These analyses help AI researchers
 24 identify the types of data likely to improve model performance, as well those that may diminish it.
 25 Pineau Decl. ¶¶ 5–6; Kambadur Decl. ¶ 6; BG II Ex. 63 (Kambadur Dep.) 32:10–33:19, 35:17–
 26 36:15, 117:13–118:14. Consistent with this research and development purpose, LibGen data
 27 downloaded in 2022 was used to determine whether and how use of the data would impact LLM
 28 performance, as measured using industry benchmarks. *Id.* And Plaintiffs do not explain how “cross-

referencing” content downloaded from LibGen in 2023 and Anna’s Archive in 2024, which was used to train Llama, to assess whether it contained third party content (Opp. at 13–14), could possibly be an infringement of Plaintiffs’ rights or require a separate fair use analysis. There is no allegation or evidence that such evaluations entailed making further copies of Plaintiffs’ books.

In sum, all copying described in the TAC or Plaintiffs’ Opposition was inarguably performed for purposes of developing and training Meta’s transformative Llama models, and constitutes fair use as a matter of law. There are no instances of copying alleged by Plaintiffs that are not squarely addressed by Meta’s Motion for summary judgment and subject to its fair use defense.⁸

B. Bad Faith, If Relevant at All, Does Not Preclude Fair Use

Plaintiffs continue to focus heavily on Meta’s downloading of works from online repositories, asserting that such conduct constitutes “bad faith.” Opp. at 21–22. But the Supreme Court has not factored bad faith into its fair use analysis in any case since *Harper & Row Publishers, Inc. v. Nation Enterprises*, 471 U.S. 539 (1985). A decade later, the Court expressed uncertainty as to “the weight one might place on the alleged infringer’s state of mind” and concluded that “[i]f the use is otherwise fair, then no permission need be sought or granted.” *Campbell*, 510 U.S. at 585 n.18. And the Court has recently confirmed not only that there is cause for “skepticism” that “bad faith” should play “any role in a fair use analysis,” but that such skepticism is “justifiable.” *Oracle*, 593 U.S. at 33 (citing *Campbell* and Pierre N. Leval, *Toward a Fair Use Standard*, 103 Harv. L. Rev. 1105, 1126 (1990) (“Leval”)). Since *Oracle*, district courts hold that the concept of bad faith has little, if any, relevance to the fair use analysis. See *Teradyne, Inc. v. Astronics Test Sys., Inc.*, 2023 WL 9284863, at *17 n.17 (C.D. Cal. Dec. 6, 2023) (summary judgment of fair use); *Santos v. Kimmel*, 745 F. Supp. 3d 153, 165 (S.D.N.Y. Aug. 19, 2024) (same), *appeal argued*, No. 24-2196 (2d Cir. Mar. 24, 2025); *Thomson Reuters Enter. Centre GmbH v. Ross Intel. Inc.*, 2025 WL 458520, at *8 (D. Del. Feb. 11, 2025) (“[e]ven if relevant, bad faith would not move the needle”).

To be sure, in *Harper & Row* the Supreme Court said that “[i]n evaluating character and

⁸ Amici assert that the Court should distinguish between Meta’s “reproductions via BitTorrent versus its subsequent reproductions to train the LLM,” because there may be different “market harms,” including harms from the alleged simultaneous distribution of Plaintiffs’ works. IASTM Br. at 11–12. As discussed at length above, Plaintiffs have no evidence that Meta distributed any of their works, and this claim is not properly before the Court. *Supra*, at 4–7. Thus, the only “harm” Plaintiffs can properly attempt to show is from Meta’s copying.

purpose” it could not “ignore” the defendant’s “stated purpose of scooping” its competitor by publishing verbatim excerpts of a “purloined” copy of an unpublished manuscript. 471 U.S. at 562–63. But the Court announced no categorical rule that a fair use must begin with an “authorized copy.” Instead, it viewed theft of the manuscript as inseparable from the nature and purpose of the infringing use. As the Court explained, publication of those excerpts “had not merely the incidental effect but the *intended purpose* of supplanting the copyright holder’s commercially valuable right of first publication.” *Id.* at 562. In that sense, the use was not transformative—both the rightsholder and the defendant sought to be the “first publish[er] of a noted figure’s copyrighted expression.” *Id.* at 561; *cf. NXIVM Corp. v. Ross Inst.*, 364 F.3d 471, 479 (2d. Cir. 2004) (distinguishing *Harper & Row* where use of unpublished work was “quite plainly critical and transformative”).

This case is miles away from *Harper & Row*. None of the challenged works at issue here was unpublished, nor does Meta seek to publish them. Unlike the article in *Harper & Row*, which preemptively published verbatim a substantial portion of an unpublished work, it is undisputed that Llama cannot be used as a substitute for reading Plaintiffs’ books. And critically, the method by which Meta acquired Plaintiffs’ books has no bearing on the nature and purpose of its use. Had Meta instead struck a deal with libraries to scan or download their books (as in *Google Books*), the resulting data would have been used in an identical way, Plaintiffs likewise would not have received any remuneration for those copies, and Meta’s use to develop and train Llama would still be a quintessentially transformative one.⁹ Thus, unlike in *Harper & Row*, the manner of acquisition in this case is irrelevant to whether Meta’s use of the works was transformative and fair. *See Leval*, at 1126 (fair use “focus[es] not on the morality of the secondary user, but on whether her creation claiming the benefits of the doctrine is of the type that should receive those benefits[,]” primarily focusing “on whether the secondary use is productive and transformative and whether it causes excessive injury to the market for the original”); *see also IP Profs’ Br.* at 2–4.¹⁰

As Plaintiffs acknowledge (Opp. at 4), the fair use doctrine *always* contemplates an

⁹ Likewise, to borrow Plaintiffs’ example (Opp. at 6), had Meta stolen physical copies of Plaintiffs’ books from a bookstore to train Llama, the *store owner* would have a cause of action for the theft, but that conduct would not give rise to a *copyright* claim by Plaintiffs.

¹⁰ The IASTM Brief (at 11) miscites *Google Books*, 804 F.3d at 208, for the proposition that the

1 unauthorized use (copying, display, distribution, etc.) that would be infringing but for its
 2 satisfaction of the statutory fair use factors. For example, in *Oracle*, “Google copied portions of
 3 the Sun Java API precisely,” 593 U.S. at 30, in part because it did not want to comply with all of
 4 the terms of Oracle’s standard license for its API, *see id.* at 8. “But since virtually any unauthorized
 5 use of a copyrighted computer program . . . would do the same,” the relevant inquiry for fair use
 6 was not whether the copying was unauthorized, but rather whether “its use was consistent with that
 7 creative ‘progress’ that is the basic constitutional objective of copyright itself.” *Id.* at 30.

8 The categorical claim that fair use must begin with an “authorized” copy, *Atari Games*
 9 *Corp. v. Nintendo of Am. Inc.*, 975 F.2d 832, 843 (Fed. Cir. 1992), is thus nonsensical—the point
 10 of the statutory protection is that the copying is unauthorized but nevertheless permitted. That is
 11 why the Ninth Circuit has repeatedly found fair use even when the use began with an unauthorized
 12 copy. *See* Meta Mot. at 16 & n.8 (discussing *Perfect 10*, 508 F.3d at 1164 n.8, and *Kelly v. Arriba*
 13 *Soft. Corp.*, 336 F.3d 811, 815 (9th Cir. 2003) (granting summary judgment)). Indeed, in
 14 *Connectix*, the Ninth Circuit held that the defendant’s reverse-engineering of Sony BIOS software
 15 to create a competing game system constituted fair use “as a matter of law,” 203 F.3d at 608, even
 16 though Sony had initially used “bootleg copies” of the BIOS “found on the Internet.” *Sony Comput.*
 17 *Ent., Inc. v. Connectix Corp.*, 48 F. Supp. 2d 1212, 1219 (N.D. Cal. 1999). Thus, even if *Atari* remains
 18 good law in the Federal Circuit after *Campbell* and *Oracle*,¹¹ its overbroad statement that fair use
 19 requires “an authorized copy of a literary work,” 975 F.2d at 843, cannot be correct, has never been
 20 endorsed by the Supreme Court (not even in *Harper & Row*), and is not the law in the Ninth Circuit.

21 Under the correct view of the law, then, it is clear that as long as Meta’s use was ultimately
 22 fair, Meta would have been able to make an initial copy of the works without the rightholder’s
 23 permission. Throughout their brief, Plaintiffs repeatedly use the terms “stolen,” “pirated,” and
 24 “illegal” to describe a work that has been copied or distributed without permission, but that is just

25 court “took pains to note that Google’s initial acquisition of the copyrighted works was not itself
 26 an infringing act.” However, no such finding (or discussion) appears anywhere in the decision.
 27 The cited page of the decision, from its “Background” section, merely noted that Google obtained
 28 digital copies of 20 million books through bi-lateral agreements with libraries, which absent author
 consent would undoubtedly be an “infringing act” but for fair use.

¹¹ Meta was unable to find a single case post-dating *Oracle* that relies on *Atari* for the proposition
 that fair use requires an authorized copy or that bad faith otherwise precludes a fair use defense.

1 a more sensational way of saying “unauthorized” or “infringing.” That is so because a making a
 2 digital copy of a work without the rightsholder’s permission does not, on its own, implicate any
 3 law other than the Copyright Act. Plaintiffs also try to refocus on the fact that a third party made
 4 an initial copy without permission, so as to ascribe that wrongdoing to Meta and taint the analysis
 5 as to whether its own use was fair. But it is difficult to see why the manner in which the third party
 6 acquired its copy should matter for purposes of *Meta*’s liability under copyright law. While the
 7 third party may be liable for the original infringement, the fact that Meta made an unauthorized
 8 copy of an unauthorized copy seems of little importance—Meta’s copy was going to be
 9 unauthorized either way. There is no reason for a different outcome merely because a third party
 10 made the initial copy without permission, instead of the defendant. Such a rule would have no
 11 correlation with the incentives an author has to create useful, transformative works.

12 Plaintiffs are seemingly asking the Court to create a rule that one can never make a fair use
 13 of an infringing copy prepared by someone else. But that would contravene *Perfect 10*, *Kelly*, and
 14 *Connectix*—all of which found fair use even though the defendants made use of works that were
 15 available on the Internet only because a third party had infringed them first. Plaintiffs’ proposed
 16 rule also finds no support in *Harper & Row* or *Atari*—in both cases the copy used was “illegal” not
 17 because it was “infringing,” but because its acquisition violated laws other than copyright. *See*
 18 *Harper & Row*, 471 U.S. at 562 (physically “purloined” manuscript); *Atari*, 975 F.2d at 836, 841–
 19 42 (fraud on Copyright Office). Taken to its logical extreme, Plaintiffs’ proposed rule would mean
 20 that no one could write a fair use criticism or news article about an infringing work, both of which
 21 plainly serve a transformative purpose and would not substitute for the original. That is not the law.

22 Notably, although Plaintiffs describe their argument that “fair use cannot apply if the
 23 copyrighted work was illegally obtained in the first place” as “uncontroversial” (Opp. at 4), *even*
 24 *their own amici controvert it*. Their amici accept “the unremarkable proposition” that bad faith “is
 25 *not dispositive* to the fair use determination,” and instead recognize that the relevant authorities
 26 support, at most, only the narrower proposition that bad faith acquisition should be “considered”
 27 under the first factor. *See* IASTM Br. at 12, 14. Here, as discussed above, the source of the copies
 28 Meta used to develop and train Llama has no bearing on whether Meta’s use of those copies was

1 transformative, and Plaintiffs and their amici do not explain how it could. Thus, even if considered,
 2 Meta’s good or bad faith does not alter the balance of the fair use factors.

3 The many filesharing cases cited by Plaintiffs and amici are not to the contrary, because
 4 they involve the non-transformative distribution of music and video files for normal consumption,
 5 and thus could not satisfy the fair use factors irrespective of the provenance of the initial copy. *See*
 6 Meta Mot. at 33–36. Nor is there any merit to (or evidence for) Plaintiffs’ speculation that a fair
 7 use finding in this case will “incentivize far-reaching piracy” and “incentivize LLM companies to
 8 support and defend shadow libraries.” Opp. at 35. Whether use of materials on a filesharing site
 9 to train an LLM (or for any other purpose) is infringing turns on the particular facts of that use.
 10 The Court may only consider the specific use by Meta before it, *Goldsmith*, 598 U.S. at 533, which
 11 satisfies the fair use factors and is not infringing. If Plaintiffs are making a policy argument that
 12 the fair use doctrine should be constrained, and the scope of Plaintiffs’ copyright monopoly
 13 expanded, to disallow use of “unauthorized” materials even for a fair use purpose, the Supreme
 14 Court has directed that such matters are for Congress to decide. *See Sony Corp. of Am. v. Univ.*
 15 *City Studios*, 464 U.S 417, 430–31 (1984) (describing the Court’s “consistent deference to Congress
 16 when major technological innovations alter the market for copyrighted materials” and “reluctance to
 17 expand the protections afforded by the copyright without explicit legislative guidance”).

18 The only relevant question before the Court is whether the balance of factors shows that
 19 *Meta* made transformative fair use of copies of Plaintiffs’ works to develop and train Llama.
 20 Because the answer to that question is “yes,” the fair use factors would weigh decisively in Meta’s
 21 favor even if the Court were to find that the copies Meta used for that purpose were “unauthorized.”

22 C. The Fair Use Factors Weigh Decisively in Favor of Fair Use

23 On the core question presented, Meta’s copying of datasets containing Plaintiffs’ books to
 24 develop and train Llama furthers the objectives of copyright by enabling the creation of a new,
 25 transformative technology that serves a manifestly different purpose from Plaintiffs’ books without
 26 any cognizable harm to Plaintiffs. Their cited evidence creates no triable issue as to fair use, and
 27 their arguments badly misconstrue the relevant authorities. The Court should rule that Meta’s
 28 copying was fair use as a matter of law and grant Meta summary judgment on the § 106(1) claim.

1 **1. The purpose and character of Meta’s use strongly favor fair use (Factor
2 One)**

3 Plaintiffs offer no rebuttal to Meta’s showing that, under well-settled case law, Llama is
4 transformative because it does not “merely ‘supersede[] the objects’ of” Plaintiffs’ works, but
5 plainly “adds something new, with a further purpose or different character.” *Goldsmith*, 598 U.S.
6 at 527–29 (quoting *Campbell*, 510 U.S. at 579). It is undisputed that the purpose of Plaintiffs’
7 books is to be read, and they cannot be read using Llama. Meta Mot. at 15. The same was true in
8 *Google Books*. Google copied 20 million books to create its search tool, but the court had “no
9 difficulty” concluding at summary judgment that this was transformative, even though up to 16%
10 of each book could be read using the tool, because its purpose was to “make available significant
11 information *about those books*,” not to reproduce them. *Authors Guild v. Google, Inc.*, 804 F.3d 202,
12 216–17, 223–24 (2d Cir. 2015) (emphasis in original).

13 Llama is even more transformative than Google’s search tool. Its purpose is not to return
14 snippets of text from specific books, but to generate entirely new text based on statistical analysis
15 across its vast and varied training data. Meta Mot. at 10. Further, Plaintiffs’ own evidence
16 establishes that, even subjecting Llama to intense adversarial prompting, the most expression it
17 could be made to output from Plaintiffs’ books was, on average, a single passage (from the entire
18 book) of “roughly 50 tokens,” or up to 50 words, Opp. at 21, far less than was found fair use in
19 *Google Books*. Plaintiffs’ expert disclaimed that Llama could reproduce any significant percentage
20 of Plaintiffs’ books. BG Ex. 24 (Lopes 3/7 Dep.) 237:16–19 (“Q: You are not offering any opinion
21 that Llama is able to reproduce, you know, any significant percentage of these books, correct? A:
22 Correct.”); *see also* BG Ex. 23 (Lopes 2/13 Dep.) at 141:22–143:5 & BG II Ex. 56 (Lopes 3/7 Dep.)
23 at 223:16–224:11, 234:5–235:21, and 238:13–21 (only a few passages from any book outputted).

24 Plaintiffs half-heartedly refer to Meta’s concerns about the *potential* for regurgitation, as
25 well as documents reflecting Meta’s efforts to ensure that “models do not memorize and regurgitate
26 training data.” Opp. at 20–21. These materials show that Meta sought to *avoid* infringement, not
27 that any meaningful regurgitation occurs. *See, e.g.*, Pritt Ex. 120 (Esiobu Dep.) 83:1–4 (testifying
28 that the rate of regurgitation was “extremely low … very close to zero”); Pritt Ex. 125 (LeCun Dep.)

129:11–131:22 (explaining that LLMs generally cannot “regurgitate the whole novel or even a
 2 chapter or even a paragraph probably,” but may be able to output a “famous quote” if it “appear[s]
 3 thousands of times in a training set”). That intent to avoid infringement is why Meta deduplicated
 4 the training data before training Llama. Meta Mot. at 9, 38–39.

5 Plaintiffs posit repeatedly (without citing any evidence) that Meta “intentionally designed
 6 its LLMs to emulate the writing style of specific authors,” and that this somehow creates a “factual
 7 dispute.” Opp. at 16; *see also id.* at 17 (asserting that “when a Llama user asks the model to write
 8 a work of fiction in the style of Richard Kadrey, Llama will do it”); *id.* (“Meta produced fine-tuning
 9 data … intended to replicate the writing style of named Plaintiff Junot Diaz”) (citing Pritt Ex.
 10 112).¹² None of this helps Plaintiffs, because style is not protectable by copyright.

11 It is black-letter copyright law that “artistic styles” constitute ideas or concepts that are
 12 excluded from copyright protection under the idea-expression dichotomy. *See* 17 U.S.C. § 102(b);
 13 Meta Mot. at 12; *Mattel, Inc. v. MGA Ent., Inc.*, 616 F.3d 904, 913–17 (9th Cir. 2010) (copyright
 14 law precludes any “monopoly” over stylistic ideas and concepts); 2 Patry on Copyright § 4:14 (Mar.
 15 2025 update) (style is “not protected”). This prohibition on protection for style specifically extends
 16 to “writing style.” *Douglas v. Osteen*, 317 F. App’x 97, 99 (3d Cir. 2009); *see also Whitehead v.*
 17 *CBS/Viacom, Inc.*, 315 F. Supp. 2d 1, 11 (D.D.C. 2004) (“[S]tyle alone cannot support a copyright
 18 claim.”); *Nesbitt v. Shultz*, 2001 WL 34131675, at *7 & n.4 (M.D. Pa. May 10, 2001) (“style[s] of
 19 writing” are unprotectable “ideas or concepts”). Plaintiffs cite no authority for their sideshow
 20 “style” argument, and it certainly does not raise a triable issue as to Llama’s transformativeness.

21 Plaintiffs’ final argument to sidestep the unavoidable conclusion that factor one weighs for
 22 Meta is that Llama does something *so different* from Plaintiffs’ books that it has no “critical bearing”
 23 on them and, thus, is not a “traditionally transformative use[].” Opp. at 18–19 (agreeing that Llama

25 ¹² Pritt Ex. 112 is a list of questions users might ask Llama, prepared to finetune the model on how
 26 to respond. For instance, in response to Plaintiff Klam’s prompt to output text from his book, Llama
 27 said it would not do so for copyright reasons. BG Ex. 4. Teaching the model to respond that way
 28 required post-training. BG Ex. 47 (Scialom Dep.) 160:16–161:20, Ex. 48 (Touvron Dep.) 256:13–
 258:7. That Meta anticipated style-type questions does not show that Meta “intended” its models
 to replicate any Plaintiff’s style, and none of Plaintiffs’ cited exhibits shows that Llama can or
 would do so. In any event, Plaintiffs do not identify any Llama outputs that purportedly replicate
 their copyrighted expression, BG Exs. 1–3, 5, which is all that is protected.

1 can “serve as a personal tutor,” “assist with creative ideation, and help users to generate business
 2 reports” among many other uses unrelated to Plaintiffs’ books). This argument backfires.

3 The Supreme Court has repeatedly held that the examples of fair use enumerated in § 107
 4 (e.g., criticism, comment, scholarship, research) are “illustrative [] not limitative.” *Campbell*, 510
 5 U.S. at 577. Section 107 “set[s] forth *general* principles, the application of which requires judicial
 6 balancing, depending upon relevant circumstances, including ‘significant changes in technology.’”
 7 *Oracle*, 593 U.S. at 19. The “more transformative the new work, the less will be the significance
 8 of other factors” *Campbell*, 510 U.S. at 579; *Goldsmith*, 598 U.S. at 531 (“a use that has a
 9 distinct purpose is justified because it furthers the goal of copyright ... without diminishing the
 10 incentive to create”); *Google Books*, 804 F.3d at 214 (“The more the appropriator [uses] copied
 11 material for new, transformative purposes, the more it serves copyright’s goal of enriching public
 12 knowledge and the less likely [] the appropriation will serve as a substitute for the original[.]”).
 13 Thus, Plaintiffs’ suggestion that Llama’s purpose and function are *too different* to qualify for fair
 14 use protection is not only self-defeating, it turns copyright law on its head.

15 Plaintiffs also take language from *Goldsmith* out of context to argue that a use must have a
 16 “critical bearing” on the underlying works to be transformative. Opp. at 19. That, too, is wrong.
 17 The selected quotations are drawn from the Court’s lengthy discussion of parody and other forms
 18 of commentary, in which it noted that “parody needs to mimic an original to make its point,”
 19 *Goldsmith*, 598 U.S. at 530, and, “[m]ore generally, when *commentary* has no critical bearing on
 20 the substance or style of the original composition, ... the claim to fairness in borrowing from [it]
 21 diminishes accordingly[.]” *Id.* at 546. But Llama is not a parody; nor does its transformativeness
 22 arise from any attempt to comment on Plaintiffs’ works. Instead, it is transformative because it
 23 serves a different purpose from Plaintiffs’ books, which they now concede. That weighs heavily
 24 in favor of fair use. *See, e.g.*, *Oracle*, 593 U.S. at 30–32 (“Google’s use of the Sun Java API seeks
 25 to create new products” was “transformative”); *Perfect 10*, 508 F.3d at 1165 (Google’s display of
 26 thumbnail images was transformative because its tool “provide[d] an entirely new use”); Meta Mot.
 27 at 15–17 (citing additional cases).

28 Llama’s “commercial purpose” is of little moment. As noted in Meta’s Motion, “[m]any of

1 the most universally accepted forms of fair use, such as news reporting and commentary, ... as well
 2 as parody, are all normally done commercially for profit.” *Google Books*, 804 F.3d at 219.
 3 Plaintiffs offer no explanation for why Llama’s availability for both research and commercial
 4 purposes might alter the fair use analysis here; it does not. *See* Meta Mot. at 18 (citing numerous
 5 cases finding commercial uses fair as a matter of law).

6 **2. The “nature of the copyrighted work” favors fair use (Factor Two)**

7 Plaintiffs are wrong to suggest (Opp. at 22–23) that analysis under the second factor begins
 8 and ends with the fact that Plaintiffs’ books are creative, literary works. As *Google Books* observed,
 9 the fact that certain of the plaintiffs’ books were “factual” was not a “boost to Google’s claim of fair
 10 use,” and conversely, “[i]f one (or all) of the plaintiff works were fiction,” that would not have
 11 “change[d] in any way [its] appraisal” that Google’s coping of the books was fair. 804 F.3d at 220.

12 It is true, of course, that copyright protects only an “author’s manner of expressing [] facts
 13 and ideas.” *Google Books*, 804 F.3d at 220. But Plaintiffs’ argument (echoed by several amici) that
 14 factor two weighs against fair use because Meta’s initial copying of Plaintiffs’ works captured not
 15 only unprotected statistical information, but also their “creative expression,” misses the mark. Opp.
 16 at 22–23. In *Google Books*, Google copied the expression in millions of copyrighted books (and even
 17 made up to 16% available for viewing in snippets). 804 F.3d at 216–17, 223–24. Likewise, in *Kelly*
 18 and *Perfect 10*, all of the “creative expression” in the copyrighted images at issue was captured in the
 19 initial indexing of websites, and that expression was viewable to users of the defendants’ search tools,
 20 albeit in “thumbnail,” rather than full-size, form. *Kelly*, 336 F.3d at 815; *Perfect 10*, 508 F.3d at 1165.
 21 And, of course, in any case involving criticism, commentary, or parody, some creative expression from
 22 the underlying work must be evident in the secondary work. Yet, such uses are fair because they serve
 23 a different purpose from, and do not substitute for, the original works. *See* Meta Mot. at 15–17.

24 Here, as in *Google Books*, Meta copies works to extract unprotectable information about the
 25 words they contain. *See* Meta Mot. at 10, 22. This necessarily involves capturing the “expression”
 26 in that work in the first instance, including information about the “arrangement of the words.” Opp.
 27 at 23. But Meta does not make these copies for purposes of enabling Llama to reproduce Plaintiffs’
 28 expression, and that expression is not preserved in its code or model weights. Instead, the pre-training

1 process extracts statistical relationships between words and concepts across all of the vast training
 2 data; none of the original expression from any individual work remains in the model. *See* Ungar
 3 Decl. ¶¶ 11–14, 31, 37–38, 44; Meta Mot. at 9–10. Nor does Llama output that expression when
 4 prompted. No one can use Llama to read Sarah Silverman’s description of her childhood, or Junot
 5 Diaz’s story of a Dominican boy growing up in New Jersey, and Plaintiffs do not claim otherwise.
 6 Thus, Llama is an even clearer example of using a copy of a work to extract unprotectable information
 7 than the search tool in *Google Books*. Its statistical modeling of the relationships between words
 8 across millions of texts reflects no creative expression, much less Plaintiffs’ protected expression.¹³

9 Plaintiffs are also wrong to dismiss the Ninth Circuit’s analysis in *Connectix* as irrelevant.
 10 Although that case addressed the copying of computer code rather than books, it nevertheless drew a
 11 clear line between copying for the purpose of reproducing protected elements versus copying for the
 12 purpose of accessing unprotected functional elements. *Connectix*, 203 F.3d at 603–04. The second
 13 factor weighed in favor of fair use because Connectix’s repeated copying of Sony’s software was
 14 “necessary to gain access to the unprotected functional elements within [Sony’s] program.” *Id.* at 603.
 15 Moreover, in adjudicating whether the repeated copying was “necessary,” the court declined to
 16 scrutinize the everyday decisions of the engineers, or to second-guess whether they could have made
 17 fewer copies during the engineering process. *Id.* at 605. So too here, what matters is that unprotected
 18 information about the words used in Plaintiffs’ works could not be obtained or processed without first
 19 copying those works. *See* Meta Mot. at 22. “The copyright resulting from the Plaintiffs’ authorship
 20 of their works does not include an exclusive right to furnish the kind of information about the works
 21 that [search tools or generative AI models] provide to the public.” *Google Books*, 804 F.3d at 225.

22 Nor is it true that fair use for intermediate copying is limited to the software context. Opp.
 23 at 19. Although the need to make intermediate copies to accomplish a transformative use frequently
 24 arises in software cases, there is no distinction between software cases and cases involving other
 25 types of works. Meta’s use may not, as in *Connectix*, begin with a piece of software, but its need
 26 for multiple copies is identical: to extract the unprotected information needed for pre-training

27 ¹³ Multiple amici assert that Llama, as well as models developed by other companies, are designed
 28 to mimic and reproduce the expression in their training material. Pls.’ Profs.’ Br. at 10–11; AAP
 Br. at 7–9; *see* CA Br. at 9–10. This speculation is not unsupported and contradicted by the record,
 and amici’s characterizations about what third party models may do is not relevant or probative here.

1 Llama, Meta first needed to be able to access it in the datasets, which required a digital copy.¹⁴
 2 Where, as here, a copy is made and used to create a transformative technology and defendant “does
 3 not reveal that digital copy to the public[,]” *Google Books*, 804 F.3d at 221, “both the making of
 4 the digital copies and the use of those copies to offer the [] tool [a]re fair uses.” *Id.* at 217 (citing
 5 *Author’s Guild, Inc. v. HathiTrust*, 755 F.3d 87, 105 (2d Cir. 2014)).

6 It also matters greatly that Plaintiffs’ works were previously published. “Published works are
 7 more likely to qualify as fair use because the first appearance of the artist’s expression has already
 8 occurred.” *Kelly*, 336 F.3d at 820; *see also Harper & Row*, 471 U.S. at 564. Even when a work is
 9 creative in nature and reproduced in whole, its prior publication can mean that the second factor
 10 “weighs only slightly in favor” of the rightsholder. *Kelly*, 336 F.3d at 820. Under the same rubric,
 11 the combination of Meta’s use to extract only non-protected aspects of Plaintiffs’ works and the fact
 12 that they were previously published mean that this factor weighs, even if slightly, in favor of fair use.

13 **3. Meta’s copying of entire books was reasonable (Factor Three)**

14 Plaintiffs fail to address any of the cases cited in Meta’s Motion holding that copying an
 15 entire work where “reasonable” or “necessary” to achieve the purpose of the fair use. *See Kelly*,
 16 336 F.3d at 821 (“reasonable” to “copy each of Kelly’s images as a whole” as copying less would
 17 “reduc[e] the usefulness of the visual search engine”); *Sony Corp. of Am. v. Universal City Studios, Inc.*, 464 U.S. 417, 449–50 (1984); *Bill Graham Archives v. Dorling Kindersley Ltd.*, 448 F.3d 605,
 18 613 (2d Cir. 2006) (granting summary judgment despite use of entire works); *A.V. ex rel. Vanderhye v. iParadigms, LLC*, 562 F.3d 630, 639–40, 642 (4th Cir. 2009) (same).

21 Plaintiffs do not claim that Meta took more than was necessary from their books to
 22 accomplish its transformative purpose of developing an LLM capable of understanding how
 23 language is used across many forms of text. That would fly in the face of the foregoing authorities.
 24 Google could have copied fewer books or only portions of books, the defendant in iParadigms could
 25 have extracted only parts of papers, and the defendant in *Bill Graham* could have used sub-portions
 26 of the at-issue posters. In each instance, using less than the full work would have “reduc[ed] the

27 ¹⁴ Many transformative uses do not require an intermediate copy. For instance, anyone can make
 28 a protected parody of a movie or song upon seeing or hearing it, without first downloading it to a computer. But software products like Llama, or the game system in *Connectix*, can be developed only through use of intermediate digital copies.

usefulness” of the secondary work, *Kelly*, 336 F.3d at 821, while use of the whole work was reasonable for what defendant sought to accomplish. The same is true here.

Plaintiffs also give short shrift to the pronouncement in *Google Books* that what matters is “not so much ‘the amount and substantiality of the portion used’ in making a copy, but rather the amount and substantiality of what is thereby made accessible to a public for which it may serve as a competing substitute.” 804 F.3d at 222 (emphasis omitted). The court thus found that Google “satisfie[d] the third factor test” because, “[w]hile Google makes an unauthorized digital copy of the entire book, it does not reveal that digital copy to the public.” *Id.* at 221–22. Because the same is undisputedly true of Llama, Meta also satisfies the third factor test.

4. **Llama does not harm any cognizable market for Plaintiffs’ works (Factor Four)**

As Meta’s Motion established (at 24–33), factor four weighs in favor of fair use because Llama does not substitute for Plaintiffs’ works and causes them no cognizable harm, but does provide tremendous public benefits. Plaintiffs cannot overcome that showing.

a. Any so-called “market” for LLM training data is not cognizable

Plaintiffs devote much of their discussion of factor four to Meta’s efforts to acquire training data through agreements with third party publishers, while wholly ignoring the core issue: whether Plaintiffs are legally entitled to demand compensation for non-substitutive transformative use of their works. *Bill Graham Archives*, 448 F.3d at 614. They are not, rendering the entire discussion inapposite. *See* Meta Mot. at 26–27.

A copyright holder “cannot prevent others from entering fair use markets merely by developing or licensing a market for … transformative uses of its own creative work.” *Tresóna Multimedia, LLC v. Burbank High Sch. Vocal Music Ass’n*, 953 F.3d 638, 652 (9th Cir. 2020) (quoting *Bill Graham Archives*, 448 F.3d at 614–15). Thus, in assessing the fourth factor, courts must determine whether the secondary use serves a “different market function” from the original. *McGucken v. Pub Ocean Ltd.*, 42 F.4th 1149, 1164 (9th Cir. 2022) (explaining that market harm and transformativeness are “linked”). Only harm occasioned by market substitution is cognizable (*id.*; *see Campbell*, 510 U.S. at 591); and market substitution does not encompass licensing for

transformative uses, even where they compete. *See Connectix*, 203 F.3d at 607–08; *see also HathiTrust*, 755 F.3d at 99 (“The only market harms that count are the ones that are caused because the secondary use serves as a substitute for the original, not when the secondary use is transformative[.]”). Were it otherwise, rightsholders could always overcome a fair use defense by pointing out the hypothetical possibility of licensing their work for the transformative use.

Plaintiffs acknowledge that “[t]he fourth factor is concerned with the threat of market substitution” (Opp. at 25), but seek to evade this limitation by arguing—without any reasoned basis—that Meta’s copying is not transformative. *See, e.g., id.* at 28 (describing Meta’s copying of Plaintiffs’ books to develop and train Llama as “a textbook example of” a “non-transformative” market substitution), 33 (copying was “[s]traightforward substitution”). Indeed, every decision cited by Plaintiffs concerns a *non*-transformative use bearing no relation to Meta’s use here.

In *McGucken*, for example, the court rejected the fair use defense because the defendant’s “use was in no way transformative—the [infringing] article used McGucken’s photos to depict the ephemeral lake, which was exactly the purpose for which they were taken and exactly the function for which the photos had been licensed to other websites.” 42 F.4th at 1153, 1161. The Second Circuit made the same finding in *Goldsmith*. *Andy Warhol Found. for the Visual Arts, Inc. v. Goldsmith*, 11 F.4th 26, 50 (2d Cir. 2021) (use of photograph in magazine article about Prince was not transformative and had been licensed in the past for that exact use), *aff’d*, 598 U.S. 508.¹⁵

Plaintiffs’ authorities are, thus, inapposite. As discussed above and in Meta’s Motion, Llama is a highly transformative technology. Llama can help someone plan their day, solve a math problem, or summarize a meeting; but *unlike* the accused works in Plaintiffs’ cited cases, it does

¹⁵ Plaintiffs’ other cases involve similarly non-transformative uses that directly substituted for the original works. *See Monge v. Maya Mags., Inc.*, 688 F.3d 1164, 1175 (9th Cir. 2012) (“photos were not physically or creatively transformed”); *A&M Recs., Inc. v. Napster, Inc.*, 239 F.3d 1004, 1015 (9th Cir. 2001) (non-transformative reproduction/distribution of music files), *as amended* (Apr. 3, 2001), *aff’d sub nom.*, 284 F.3d 1091 (9th Cir. 2002); *Hachette Book Grp., Inc. v. Internet Archive*, 115 F.4th 163, 184 (2d Cir. 2024) (non-transformative distribution of books for reading); *On Davis v. Gap, Inc.*, 246 F.3d 152, 175 (2d Cir. 2001) (“not transformative” use of wearable art), *as amended* (May 15, 2001); *Am. Geophysical Union v. Texaco Inc.*, 60 F.3d 913, 920 (2d Cir. 1994) (non-transformative copying of scientific journals to be read), *as amended* (July 17, 1995); *Ross Intel.*, 2025 WL 458520, at *8 (non-transformative use of Westlaw headings to create a non-generative AI model designed to reproduce them and do exactly what Westlaw does).

1 not reproduce Plaintiffs' works or their protected expression or substitute for reading them. *Supra*
 2 pp. 12–13; Meta Mot. at 9–10.¹⁶ The only market Plaintiffs identify is the licensing of their books
 3 for the transformative purpose of training an LLM, which is not a purpose for which they were
 4 written. BG Ex. 14. Under Ninth Circuit authority, this is not a cognizable market as a matter of
 5 law. *Connectix*, 203 F.3d at 607–08; *see also Bill Graham Archives*, 448 F.3d at 615.

6 **b. There is no market to license Plaintiffs' books for LLM training
 7 and none is likely to form**

8 It is undisputed that Plaintiffs have never licensed any of their books as LLM training data
 9 (whether individually, through their publishers, or as part of a collective), or even offered to do so.
 10 BG Exs. 10–12. Even if markets for transformative uses were cognizable, there is no evidence
 11 supporting the existence of a market for licensing *Plaintiffs'* works as training data—not in 2022
 12 when Meta began training Llama 1 and not today.

13 This is not surprising. As explained in Meta's Motion (at 28), LLMs rely on astronomically
 14 large volumes of text, of which any individual book provides an infinitesimally small and negligible
 15 contribution to model performance. Ungar Decl. (Dkt. 496) ¶¶ 42–44. Plaintiffs' books thus have
 16 insignificant and indeterminable economic value as training data, which precludes the formation of
 17 a market to license them. Meta Mot. at 28. Plaintiffs provide no direct rebuttal to these facts.

18 Plaintiffs nevertheless insist that Meta “concedes there is an established market for
 19 purchasing Plaintiffs' copyrighted books,” and that, at a minimum, Meta deprived Plaintiffs of a
 20 sale of each book to Meta. Opp. at 32–33. Meta made no such concession. Plaintiffs overlook
 21 that Meta also could have purchased used copies of their books or partnered with libraries to scan
 22 them (as in *Google Books*), neither of which would have resulted in remuneration to Plaintiffs.¹⁷

23 ¹⁶ Plaintiffs continue to cite the report of their expert, Dr. Spulber, for the unsubstantiated assertion
 24 that Llama harms Plaintiffs by “allow[ing] the creation of works that could compete with Plaintiffs’
 25 works.” Opp. at 33 n.22, 34. As noted in Meta's Motion, he admitted at deposition that he was
 26 unaware of any instance in which a Meta LLM has been used to generate any book, much less a
 27 competing one or one that was read as a substitute for a book of Plaintiffs. BG Ex. 25 (Spulber
 Dep.) 245:7–248:1, 263:18–266:10. Moreover, creating competitive works (as when one author
 borrows ideas from another) is legally distinct from creating a market substitute. At most, Plaintiffs
 are asserting that Llama might do the former—not the latter.

28 ¹⁷ The Amicus Brief of Copyright Law Professors makes this same flawed argument, asserting that
 “all human authors have had to pay something … for most [of] the works from which they have

1 This is a red herring in any event, because Plaintiffs do not contend that it would make any difference
 2 to the factor four analysis if Meta bought a new book at retail instead of using a copy procured
 3 elsewhere. *See Author's Guild, Inc. v. HathiTrust*, 902 F. Supp. 2d 445, 462 (S.D.N.Y.), *aff'd in*
 4 *part, vacated in part*, 755 F. 3d 87 (2d Cir. 2014) (rejecting Plaintiffs' exact argument). Their claim
 5 is that it was infringement either way to use "copies of the Infringed Works during the training
 6 process to develop Llama" (TAC ¶ 100), and they cannot show that there is any market for that use.

7 Plaintiffs do not meaningfully reckon with the phenomenon of market failure—the reasons
 8 a market for a particular use does not arise—or the facts cited by Meta as likely to cause failure in
 9 the relevant market here. *See* Meta Mot. at 30–32. They do not dispute that LLMs require vast
 10 quantities of text (BG Ex. 23 (Lopes 2/13 Dep.) 20:19–22); Ungar Decl. ¶¶ 42–44); that individual
 11 works possess negligible value for this purpose (Sinkinson Decl. ¶¶ 56–57); and that rights to
 12 license books like Plaintiffs' are retained by authors, necessitating hundreds of thousands, if not
 13 millions, of costly and time consuming individualized negotiations. *Id.* ¶¶ 58–61, 69–70; BG Exs.
 14 17, 18. As Meta explained, these factors alone render impracticable any potential market for
 15 licensing trade books as training data for LLM development. Meta Mot. at 30–32; Sinkinson Decl.
 16 ¶¶ 55–70.

17 The issue of market failure extends well beyond trade books. "[A]ll of the factors that
 18 undermine the viability of a market that includes licensing books to train LLMs are exacerbated for
 19 other categories of text training data." Sinkinson Decl. ¶ 70. No one could conceivably license all
 20 of the potentially copyright protected data required to train an LLM, including innumerable trade
 21 books, textbooks, scientific papers, news articles, and code repositories, as well as every blog post,
 22 essay, press release, email, etc. swept up in massive web crawls that comprise the vast majority of
 23 text data used to train the models. *Id.*; *see* Nayak Decl. ¶ 7. Even just identifying which materials
 24 are copyright protected and by whom would be an impossible task. In a scenario such as this, in
 25 which "prohibitive[]" costs "prohibit the formation of a viable market in the first place," factor four

27 learned[.]" Pls.' Profs.' Br. at 7. The Supreme Court says otherwise. *Eldred v. Ashcroft*, 537 U.S.
 28 186, 219 (2003) ("every idea, theory, and fact in a copyrighted work becomes instantly available
 for public exploitation at the moment of publication"). Any human can read and learn from a book,
 whether they paid for it or not. And they can also copy the book's expression for a fair use purpose.

1 strongly favors fair use. *HathiTrust*, 902 F. Supp. 2d at 463–64 (emphasis omitted).

2 Unable to dispute these facts, Plaintiffs direct the Court’s attention elsewhere. They spend
 3 multiple pages cataloging various Meta documents and communications describing the company’s
 4 early exploratory outreach to publishers (Opp. at 26–31) and two drafts of a more recent forward-
 5 looking data acquisition strategy. Pritt Exs. 97, 138. None of these documents evidences a market
 6 for using *Plaintiffs’ books* as training data or that such a market is likely to develop.

7 As Meta explained in its Motion (at 28), it explored negotiations with publishers in 2022
 8 and early 2023 but quickly encountered obstacles that prevented transactions from being
 9 consummated. While Plaintiffs speculate that Meta was unwilling to pay for books (Opp. at 28),
 10 the record shows that the conversations failed to advance because publishers lacked the necessary
 11 rights to license works (BG Ex. 34 (Choudhury Dep.) at 22:22–23:17; BG Ex. 31 (Boesenbergs
 12 Dep.) at 55:1–58:5, 152:21–153:13; BG II Ex. 62 (Choudhury Dep.) at 20:22–22:7), had too few
 13 titles to make any transaction useful (BG Ex. 30 (Bell Dep.) at 131:21–133:2, 136:6–20; BG Ex.
 14 45 (Nho Dep.) at 148:8–149:2), and were demanding unrealistic sums (BG II Ex. 61 (Boesenbergs
 15 Dep.) at 83:1–22, 154:7–155:3)—all hallmarks of market failure. Sinkinson Decl. ¶¶ 55–71.

16 As to Meta’s more recent strategy documents, they reflect efforts to revisit exploration of
 17 deals as a “surgical lever” to obtain access to relatively “small amount[s]” of necessary data that
 18 cannot be secured through other means. See Pritt Ex. 138 at -888. Far from showing that a licensing
 19 market for *Plaintiffs’ books* is likely to form, these documents memorialize the same problems that
 20 hampered Meta’s earlier outreaches. They detail, among other things, that “no amount of
 21 reasonable licensing budget can … get the tens of trillions of high quality tokens” necessary to train
 22 an advanced LLM (Pritt Ex. 97 at -194); and that, despite the narrow focus on discrete categories
 23 of data, potential partners lack necessary rights, are offering lower volumes of data than anticipated,
 24 and are seeking unreasonably high fees. Pritt Ex. 138 at -889. To wit, the document indicates that
 25 [REDACTED]

26 [REDACTED] which was “not even sufficient” for Meta to conduct a study to evaluate the data. *Id.*

27 Plaintiffs and their amici also refer to several third-party data agreements, but only one, a
 28

1 one-off agreement between [REDACTED] is in the record.¹⁸ [REDACTED]
 2
 3
 4 [REDACTED] As such, it exemplifies a point made by Dr. Sinkinson (and not
 5 rebutted by Plaintiffs): that developers may value and pay for access to curated and/or non-public
 6 training data as a matter of contract, even in situations where licensing of intellectual property rights
 7 is not required because the materials are not copyrighted or the use is a fair one. Sinkinson Decl. ¶
 8 63 (describing the example of an agreement for access to legal opinions in the public domain).
 9

10 Moreover, the circumstances surrounding that agreement only serve to reinforce Professor
 11 Sinkinson's market failure analysis. Sinkinson II Decl. ¶¶ 11–12. [REDACTED]
 12 [REDACTED]
 13 [REDACTED]
 14 [REDACTED]
 15 [REDACTED]
 16 [REDACTED]
 17 [REDACTED] Obtaining the number of tokens needed to train Llama
 18 3, for example, would require a years-or even decades-long process of executing tens of thousands
 19 of similar agreements—which is infeasible and impractical and undermines any likely market.

20 Contrary to Plaintiffs' characterization, these facts show more than “that *some* transaction
 21 costs would accompany licensing efforts.” Opp. at 30. The cause of market failure is that
 22 conditions render transaction costs impractically high relative to the value exchanged. Sinkinson
 23 Decl. ¶¶ 55, 61, 68. Those conditions are demonstrated by the [REDACTED]
 24

25 ¹⁸ Other data agreements referenced by Plaintiffs and their amici are not properly before the Court.
 26 The AAP Brief (at 11–13) purports to describe “AI Licensing Deals” between developers and its
 27 members, but “[a]mici are not parties and cannot introduce evidence.” *High Sierra Hikers Ass'n v. Powell*, 150 F. Supp. 2d 1023, 1045 (N.D. Cal. 2001) (striking extra-record evidence), *aff'd in part, rev'd in part sub nom., High Sierra Hikers Ass'n v. Blackwell*, 390 F.3d 630 (9th Cir. 2004).
 28 Their references to “extra-record facts” are improper and should be stricken. *Id.* Beyond that, AAP does not purport to have personal knowledge of any of these so-called licenses, describe their terms, attach the agreements or offer foundation for them, or explain how the purported agreements might demonstrate a market for the licensing of Plaintiffs' books.

1 [REDACTED] Whether publishers such as
 2 [REDACTED] can, in theory, act as intermediaries to attempt to negotiate licenses on behalf of a
 3 small set of rightsholders (Opp. at 30), is irrelevant when the end result cannot even begin to satisfy
 4 LLM development needs. Plaintiffs also fail to account for the fact that books are just a small
 5 portion of overall training data needs, and any such intermediary model is inapplicable to the
 6 millions of other materials contained in Llama training corpuses. Sinkinson Decl. ¶¶ 69–70.

7 Plaintiffs also cite an analysis by Meta of public information, unaccompanied by any
 8 testimony, to suggest that Meta “extensively surveyed the training data licensing agreements,” and
 9 determined that its competitors have executed several text licenses that evidence a market for
 10 Plaintiffs’ works. Opp. at 29; Pritt Ex. 97. But that document includes no confirmed details
 11 regarding the terms of any agreements, including whether they are, in fact, copyright licenses as
 12 opposed to agreements for data access or provision of real-time information, or include rights to
 13 reproduce licensed content as outputs, and Plaintiffs have not put any such agreements into
 14 evidence. Accordingly, their unsubstantiated characterization of extra-record third-party
 15 agreements of which they have no personal knowledge is entitled to no weight.¹⁹ And to the extent
 16 third-party agreements concern news publications or online user content, those categories of data
 17 are readily distinguishable from trade books. Sinkinson II Decl. ¶¶ 5–10. Large news publications
 18 own their content and can thus provide ready access to timely information and a high volume of
 19 factually rich text dating back decades, whereas securing the same volume of data from trade books
 20 might require thousands of independent negotiations. *Id.* The same is true for large online
 21 platforms like Reddit, which can provide a large volume of diverse conversational text. *Id.* ¶ 10.

22 Finally, Plaintiffs’ speculative analogizing between the growth of iTunes following the
 23 demise of Napster and what could occur in the data licensing market if the Court finds in Plaintiffs’
 24 favor, is similarly unsupported and should be disregarded. Plaintiffs cite no documents or expert
 25 opinion for this conclusion and instead rely on a single journal article, which is not admissible
 26 evidence. See *Valadez v. Cnty. of L.A.*, 2024 WL 3153207, at *10 (C.D. Cal. June 24, 2024)

27

 28 ¹⁹ The same is true of the recent press release Plaintiffs cite. See Opp. at 30 & n.18. The article
 provides no indication of whether or what licenses are contemplated, is outside the record, and
 cannot be considered for its truth even if judicially noticed.

1 (declining to judicially notice “study” published in law review article); *In re Tesla, Inc. Sec. Litig.*,
 2 477 F. Supp. 3d 903, 920 (N.D. Cal. 2020) (same).

3 In sum, Plaintiffs’ efforts to manufacture a factual dispute over the likelihood of a market
 4 developing are ineffective. Indeed, the Supreme Court has repeatedly found transformative fair use
 5 notwithstanding the existence of failed licensing discussions over the exact work at issue. *Oracle*,
 6 593 U.S. at 8; *Campbell*, 510 U.S. at 585 n.18. Plaintiffs can make no such showing here, and
 7 Meta’s use is even more transformative, warranting a fair use determination in its favor.

8 **c. Llama’s benefit to the public greatly outweighs any hypothetical
 9 harm to the market for Plaintiffs’ books**

10 Fair use serves as a “context-based check that can help to keep a copyright monopoly within
 11 its lawful bounds” by ensuring authors are afforded no “more economic power than is necessary to
 12 achieve the incentive to create” and cannot “us[e] copyright to stifle innovation” by others. Meta
 13 Mot. at 13 (quoting *Oracle*, 593 U.S. at 21–22). Here, despite their protestations about how Meta
 14 has harmed them, no Plaintiff claims that Llama’s existence will prevent them from selling their
 15 books or otherwise disincentivize them from writing. BG Ex. 13. Nor do they claim that the public
 16 can access their work through Llama instead of buying (or borrowing) one of their books, i.e., the
 17 substitutive harm recognized as “copyright’s bête noire.” *Goldsmith*, 598 U.S. at 528.

18 Instead, Plaintiffs effectively seek to extend the limited monopoly copyright affords to
 19 cover a transformative use they never anticipated making or benefitting from. This would stifle
 20 LLM innovation, set up insurmountable barriers to obtaining the vast volume and array of text
 21 needed to train and develop useful models, and ultimately deprive the more than a billion people
 22 who have downloaded Llama, and the countless others who have used it, of a groundbreaking new
 23 technology that allows the creation of new, non-infringing content. See Meta Mot. at 11, 32
 24 (detailing just some of the extraordinary public benefits and uses of Llama—none of which are
 25 disputed by Plaintiffs). In other words, it would restrain, rather than promote, the progress of
 26 science and the arts and the creation of new expression—the antithesis of copyright’s objectives.
 27 The Court should decline Plaintiffs’ invitation to upend foundational copyright principles and hold
 28 that Meta’s use of their works to develop and train Llama was fair use as a matter of law.

1 **IV. THE COURT SHOULD GRANT SUMMARY JUDGMENT TO META ON THE DMCA CLAIM**

2 Plaintiffs' claim that Meta removed CMI with intent to conceal infringement remains
 3 wholly unsupported. Faced with an unrebutted record showing that, consistent with common
 4 industry practice, Meta removed CMI and other repetitive text from training data to improve model
 5 performance (Meta Mot. at 37–40), Plaintiffs were required to proffer "evidence that would support
 6 a jury verdict." *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 256 (1986). Instead, they offer only
 7 unsupported inference and conjecture. They have no documents, testimony, or expert opinion
 8 showing that CMI was removed with knowledge or reason to know that it "will" conceal alleged
 9 infringement; indeed, they still lack a coherent theory of how CMI removal *could* do so. Meta Mot.
 10 at 39–40; *Stevens v. Corelogic, Inc.*, 899 F.3d 666, 675–76 (9th Cir. 2018). This claim cannot
 11 survive summary judgment. *Id.*; *Vaughn v. Teledyne, Inc.*, 628 F.2d 1214, 1220 (9th Cir. 1980).

12 *First*, despite nearly two years of litigation and multiple motions targeting dismissal of
 13 Plaintiffs' DMCA claims, Plaintiffs still do not offer a cogent explanation how CMI removal
 14 "conceals infringement" of their works. They cite no documents or testimony for an explanation.
 15 Nor did any of their experts opine on how the presence of CMI in a dataset would enable a user to
 16 query Llama to disclose the books upon which it was trained, while the absence of CMI would have
 17 prevented this. Mot. at 39–40. The most that Plaintiffs can muster is speculation that had CMI not
 18 been removed, "the © symbol[] could be regurgitated." Opp. at 37. But this makes no sense. The
 19 copyright symbol is not CMI, *see* 17 U.S.C. § 1202(c), and display of the symbol in Llama outputs
 20 would not reveal anything about whether Plaintiffs' works were used as training data. Their bare
 21 assertions, unsupported by evidence, cannot create a genuine issue precluding summary judgment
 22 for Meta. *Stevens*, 899 F.3d at 674–75 (affirming summary judgment because, among other things,
 23 plaintiff failed to aver how it would use CMI to "prevent or detect copyright infringement").

24 Moreover, there is nothing in the record to support that, *even if* CMI removal were somehow
 25 capable of concealing books present in the training data, Plaintiffs' ability to detect infringement
 26 could have been affected by it. As Meta has emphasized repeatedly, nothing was concealed from
 27 Plaintiffs. It is undisputed that Meta's public disclosure of its use of Books3 to train Llama 1 was
 28 the original basis of this lawsuit and, during discovery, Meta disclosed to Plaintiffs that it also used

1 Books3 to train Llama 2 and LibGen to train Llama 3. Meta Mot. at 39.

2 **Second**, there is no evidence of scienter. Meta cited expert opinion, sworn testimony, and
 3 a declaration from a member of the team that wrote the software for removing duplicative text from
 4 LibGen, to establish that CMI removal was incidental to the commonplace effort of culling various
 5 types of duplicative text from training data. Meta Mot. at 38–39. Mr. Bashlykov was explicit: “the
 6 [data processing] team had no intent to hide or obscure any information” about Meta’s training data
 7 (Bashlykov Decl. ¶ 10), and he was unaware of any basis to believe that CMI removal “could have
 8 the effect of concealing information about Meta’s training data.” *Id.* ¶ 11.

9 Again, Plaintiffs cite no contrary documents or testimony evidencing that training data
 10 concealment is a possible, let alone known or desired, outcome of removing boilerplate copyright
 11 information. Meanwhile, their own experts acknowledge that deduplication of training data helps
 12 prevent overfitting (which can impair the ability of models to generalize) (BG Ex. 23 (Lopes 2/13 Dep.)
 13 23:13–24), and that the software created by Meta to remove boilerplate information containing CMI
 14 also removed repetitive text sequences that did not include CMI. BG Ex. 22 (Krein Report) ¶¶ 95–101.
 15 Plaintiffs also do not dispute that removal of high-frequency text (i.e., text appearing thousands or
 16 millions of times in a dataset) is common practice in processing training data. Ungar Decl. ¶¶ 65–69.

17 Lacking any affirmative evidence of scienter, and in the face of testimony establishing the
 18 actual reasons why Meta filtered uninformative high-frequency text from datasets, Plaintiffs try to
 19 manufacture a factual dispute with *ipse dixit* and strained inferences. For example, without any
 20 supporting testimony, they contend that a jury could reasonably infer from Exhibit 56—a document
 21 authored by Mr. Bashlykov (*see* BG II Ex. 60 (Bashlykov Dep.) 60:921) that describes the script
 22 his team used—that because (i) the script also removed PII (personally identifiable information),
 23 and (ii) PII removal was motivated by legal concerns, (iii) Meta’s removal of CMI must have *also*
 24 been motivated by (unstated) legal concerns. Opp. at 39, Pritt Ex. 56. But the document details no
 25 such concerns, and the section Plaintiffs cite also describes “remov[al] [of] excessive new line
 26 character[s]” and “lines that contain <8% [of] unique words” to address repetition more generally. *Id.*

27 Elsewhere, Plaintiffs suggest that concealment is evidenced by documents reflecting
 28 discussions about finetuning to prevent Llama 2 from hallucinating about what it was trained on

(Opp. at 37, Pritt Ex. 149), and experiments conducted during development of Llama 3 to evaluate whether adding attribution data to the pretraining corpus, including certain CMI, improves output quality. Opp. at 40. But these documents do not concern CMI removal and, if anything, contradict any inference of scienter—the former demonstrates the unreliability of the models to accurately explain training data contents (Pritt Ex. 149), while the latter documents detail significant uncertainty around the effect of adding “source metadata.” See Pritt Exs. 137 at -970, 160.

Lastly, Plaintiffs turn to a newly-disclosed analysis of CMI removal in “B3G,” the dataset used by Meta that contains of portions of Books3 and Gutenberg, to argue that Meta’s removal of CMI from data in Books3, but not Gutenberg, implies a concealment motive. Opp. at 39. Plaintiffs’ B3G analysis constitutes undisclosed, untimely, and faulty expert testimony, improperly conducted by one of Plaintiffs’ attorneys, and should be stricken on those bases.²⁰ See *Jarrow Formulas, Inc. v. Now Health Grp., Inc.*, 2012 WL 3186576, at *17 (C.D. Cal. Aug. 2, 2012) (excluding undisclosed and untimely expert declaration despite claim that declaration was based on personal knowledge), *aff’d*, 579 F. App’x 995 (Fed. Cir. 2014). But even if the Court were to entertain a belated expert report prepared by a party attorney, it is not probative of concealment. Mr. Butterick at best avers that a small fraction of works in the Gutenberg portion of B3G contain copyright notices. Butterick Decl. ¶¶ 12–15. This is insufficient to create a plausible inference that Meta intentionally removed CMI from Books3 to conceal infringement, not least because Meta publicly disclosed its use of Books3 to train Llama 1. Meta could not have known or had reason to know that CMI removal would conceal something that it conspicuously announced.

²⁰ Plaintiffs understood that analysis of CMI was the province of experts, as Dr. Lopes opined in her opening report that Meta removed CMI from copies of their books in the Books3 and LibGen datasets. Pritt Ex. 147. None opined about the presence of CMI in the Gutenberg portion of the B3G dataset, even though it was produced in May 2024. Butterick Decl. (Dkt. 519) ¶ 9. Plaintiffs are now attempting to evade expert disclosure requirements “through the simple expedient of proffering an expert in lay witness clothing.” Fed. R. Evid. 701 advisory committee’s notes to 2000 amendments. Mr. Butterick’s untimely expert opinion is also improper under Fed. R. Evid. 702, as he does not establish that he is qualified to offer the opinions reflected in his declaration and does not disclose the methodology he used to search through tens of thousands of Gutenberg entries. And even as they turn to Mr. Butterick for this improper analysis, they did *nothing* to show that the Llama models can identify books in Gutenberg (from which CMI was supposedly not removed) as books on which they were trained, while books in Books3 that supposedly were subject to CMI removal cannot be so identified, rendering the analysis he does provide irrelevant and non-probative as to concealment. In any case, it would be prejudicial to allow Plaintiffs to rely on Mr. Butterick’s untimely declaration, to which Meta’s experts had no opportunity to respond.

1 ***Third***, Plaintiffs do not engage at all on the issue of their lack of statutory and Article III
 2 standing on this claim. *See* Meta Mot. at 40. They articulate no injury caused by Meta’s alleged
 3 concealment effort because there is none. As noted, Meta publicly disclosed that it used Books3 to
 4 train Llama 1 and, during discovery, it disclosed to Plaintiffs that it also used Books3 for Llama 2
 5 and portions of Libgen for subsequent models. Meta Mot. at 39. Moreover, only one of the
 6 Plaintiffs appears to have ever used Llama, and none testified that they had used Llama in an
 7 attempt to discern whether Meta trained on their works. BG II Ex. 54. Even if Plaintiffs could
 8 show that Meta removed CMI with culpable scienter and that such removal did, in fact, hide what
 9 books Llama was trained on, Plaintiffs *would still lack standing* because nothing was concealed
 10 from them. Such a scenario describes a statutory violation without a corresponding concrete injury,
 11 which is exactly what the Supreme Court deemed insufficient to support Article III standing in
 12 *TransUnion LLC v. Ramirez*. 594 U.S. 413, 426–27 (2021) (explaining that “an injury in law is not
 13 an injury in fact” and that “[o]nly those plaintiffs who have been *concretely harmed* by a defendant’s
 14 statutory violation may sue”). Here too, Plaintiffs lack standing, warranting judgment for Meta.

15 ***Finally***, we are aware of no case, and Plaintiffs cite none, where a 1202 claim was allowed
 16 as to a non-infringing fair use. Since Meta’s use of Plaintiffs’ works was fair, their DMCA claim
 17 fails for the additional reason that there was no infringement to conceal.

18 **V. CONCLUSION**

19 Meta’s copying of Plaintiffs’ works to train Llama constitutes fair use under 17 U.S.C.
 20 § 107, and Plaintiffs have failed to come forward with evidence to create a genuine issue for trial
 21 on their claim that Meta violated 17 U.S.C. § 1202. Accordingly, Meta respectfully asks the Court
 22 to grant summary judgment for Meta on Plaintiffs’ claims under 17 U.S.C. §§ 106(1) and 1202.
